

April 9 2019

MISUMI Group Inc.

Warehouse relocation and expansion- floor capacity to quadruple, doubling of stocked items.

~ Significant expansion of inventory lineup, reinforcing reliable quick delivery,
with same day delivery offered in the shortest-

MISUMI Group Inc. headquarters (Head office: Bunkyo-ku, Tokyo; President and CEO: Ryukyu Ono) will relocate and expand its warehousing capacity in Indonesia. Sales office will also be integrated to form a new entity. Opening ceremony will be held locally on April 9 (Tuesday), with operations going into full swing promptly thereafter.

With this move, floor capacity will quadruple compared to current levels, and by the end of 2019, 50,000 items will be stocked, thereby doubling current stocked items. VONA has been fully operational in Indonesia since 2018; offering auxiliary materials used in production and MRO (consumables) products. Stocked variety of VONA products are being expanded vigorously, and by offering same day shipping in the shortest, it further reinforces reliable quick delivery. In so doing, significant reduction of our customer's procurement lead time is achieved.

Exterior of the Indonesian warehouse

In Indonesia, the market is expanding steadily, mainly due to automobile-related capital investment. That said, frequent reinforcement and changes to custom regulations are destabilizing distribution. There is a tendency for procurement lead time by local manufacturers to take much longer compared to other countries in the Asian region. Therefore, customers' request for "reliable quick delivery" is especially strong here out of all South-east Asia. With this warehouse relocation ①stock will be expanded significantly, with greater VONA product variety, ②greater mobility will be realized with the warehouse and sales office integration, further reinforcing MISUMI's strength of "reliable quick delivery", thereby meeting customers' request to reduce procurement lead time.

Going forward, we will continue to further strengthen the MISUMI QCT (high quality, low cost, reliable quick delivery) model, and contribute to eliminating inefficiencies relating to production auxiliary material procurement at Indonesian manufacturing sites.
